Security Policy

The Savannah Energy Corporate Security Policy outlines the guidelines, standards, and best practices that all employees, contractors, and partners of Savannah Energy must adhere to when handling company assets, data, and conducting business. All risk mitigating strategies exercised across the Savannah Energy footprint will be underpinned by the following principles:

- Make our employees feel safe regardless of where they are with a pragmatic approach.
- Allocation of locally sourced intelligence reporting.
- 24/7 response capabilities.
- Country specific risk assessments tailored to their requirements.
- Flexibility: mitigating strategies must remain relevant, agile, and responsive to changes.
- Pre-eminence of a low-profile approach wherever possible.

To achieve the above principles, the following actions that are considered essential, are implemented in a collaborative effort between Country Management & Security with COO approval:

- Conduct comprehensive site security and operational risk assessments.
- Maintain a crisis management framework providing an immediate crisis management response.
- Ensure that staff are appropriately trained and informed, whilst conducting regular drills with realistic scenarios that are tested to failure.
- Provide country specific emergency Contingency & Evacuation Plans.
- Provide country specific journey management and workforce protection.
- Military liaison: where relevant, build solid relationships with local armed/security forces.
- Provide voice/data communication capability beyond local GSM network to facilitate communications during adversity.
